PROFILE

Frontend engineer and data analyst with three years of remote contract experience across React development, product engineering and business analytics. I build full-stack products with Next.js, React Native and Supabase, and use Power BI, SQL and Python to make sense of the data behind them. Companies bring me in to build a product from the ground up and bring me back for the next one. Recent work includes ENYEMAKA, a managed agency platform; SpeedNova, a ride-hailing service; and ResultIQ, a school results platform built for ScaleUpTech. BEng in Mechatronics Engineering. Looking for remote frontend and full-stack roles.

WORK EXPERIENCE

Full-Stack Engineer (Contract, Remote) | Self-employed

Dec 2024 – Present

Project-based engineering for startups and growing companies. Brought in for the full build of each product and rehired for follow-on work.

ENYEMAKA | Managed agency platform

enyemaka.co

Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, Paystack, Flutterwave, Resend, Three.js, Vercel

- Built the platform end to end: public site, client portal, contractor workspace and admin panel, connecting clients with vetted contractors across eight service categories.
- Implemented multi-currency payments with Paystack and Flutterwave, tied to milestone-based project delivery.
- Built magic-link authentication and Row-Level Security in Supabase, and traced and fixed RLS policies that failed silently and a middleware redirect loop.
- Set up transactional email with Resend on a verified custom domain. Now building the mobile app with Expo and EAS.

SpeedNova | Ride-hailing, web and mobile

speednova.org

Next.js, React Native, Expo, NativeWind, Supabase, TypeScript, Tailwind CSS, Google Maps

- Built the web platform and React Native mobile apps for a driver-first ride-hailing service in Port Harcourt, where drivers keep 85% of each fare and see their payout before every trip. In pre-launch testing.

Data Analyst (Contract, Remote) | ScaleUpTech

Jan 2025 – Present

- Built and maintained 6+ Power BI dashboards tracking 15+ KPIs across 4 business units, used by senior leadership in weekly performance reviews.
- Wrote SQL to extract, clean and transform data from relational databases with hundreds of thousands of records, cutting report turnaround from 3 days to same day.
- Automated 8 recurring reports in Python (Pandas, NumPy), reducing manual reporting time by 40%.
- Ran exploratory analysis data quality checks on operational datasets to support product planning.
- Worked with product and engineering to define metric frameworks and build 3 data pipelines that replaced ad-hoc spreadsheet processes.
- Presented bi-monthly executive briefings combining visualisations with written summaries.

ResultIQ | School results platform, built for ScaleUpTech

resultiq.ng

Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, Paystack, Zod, Vitest

- Built the platform that turns end-of-term scores into class positions, broadsheets and report cards for Nigerian schools. Now onboarding its first schools.
- Added schema validation with Zod, automated tests with Vitest, and payments through Paystack.

Frontend Engineer (Contract, Remote) | Codelary

Jun 2023 – Feb 2026

- Shipped 10+ responsive web applications in React and JavaScript for live client-facing products.
- Refactored component architecture and standardised state management, cutting bug reports by about 30% across two major releases.
- Integrated 12+ REST APIs and third-party services (payments, auth, mapping), reducing average integration time from 3 days to under 1.
- Improved load speed by 35% on 3 production apps through code splitting, lazy loading and rendering optimisations.
- Turned Figma designs into accessible (WCAG) UI components in agile sprints with designers and backend engineers.

- Reviewed frontend security on 4 production apps, fixing insecure data exposure, misconfigured CORS policies and risky dependencies.
- AI Data Annotation Specialist (Contract, Remote) | Outlier (Scale AI)

Feb 2025 – Sep 2025
- Reviewed and verified 5,000+ image annotations (bounding box and segmentation) at 98%+ accuracy against quality benchmarks.
 - Evaluated audio similarity datasets across 3 labelling projects, flagging inconsistencies before they reached model training.
 - Applied labelling guidelines across text, image and audio data on 4 concurrent projects, including text comparison and error detection.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Three.js, Vite, responsive design, accessibility (WCAG)

Mobile: React Native, Expo

Backend: Supabase, PostgreSQL, MySQL, REST APIs, authentication and authorisation

Tools & Delivery: Git, GitHub, Vercel, Netlify, Vitest, Paystack, Flutterwave

Data & Analytics: Power BI, SQL, Python (Pandas, NumPy, Matplotlib), Excel, Data visualization, Data quality checks, Spreadsheets

EDUCATION

Diploma in Management | Baze University

2024 – 2025

BEng Mechatronics Engineering | Bells University of Technology

2018 – 2023

CERTIFICATIONS

Data Analysis | CWW Tech Africa

2025

Microsoft Excel (Advanced) | Saylor Academy

2024
